### Listing of Claims

The following listing of claims will replace all prior versions, and listings, of claims in the subject application:

1. (currently amended) A facsimile use modem apparatus, comprising:

an analog interface formed from a silicon data access arrangement operative to interface with an analog telephone line, said analog interface including an insulation device configured to insulate a remainder of said facsimile use modem apparatus from said analog telephone line;

a digital interface operative to interface with an ISDN (integrated services digital network) line;

a signal converting device configured to convert a modem signal used in facsimile communications via the analog telephone line into a first signal used in the ISDN line, ~~vice-a versa~~ and convert a second signal from the ISDN line into a converted signal for use in facsimile communications via the analog telephone line;

a monitoring device configured to monitor a progress of the ~~[[G3]]~~ facsimile communications via the ISDN line, ~~said monitor~~ monitoring device being connected to the silicon data access arrangement; and

a data transmitting device operative to transmit linear data to ~~[[the]]~~ a speaker via the silicon data access arrangement.

2. (currently amended) The facsimile use modem apparatus according to claim 1, wherein said linear data is formed from facsimile sending data and facsimile reception data.

Masashi Tokuda, S.N. 10/763,707

Dkt. 2271/71523

3. (currently amended) The facsimile use modem apparatus according to claim 2, further comprising a volume adjusting device configured to multiply each of the facsimile sending data and facsimile reception data by a prescribed gain when a volume of the speaker is adjusted.

4. (original) The facsimile use modem apparatus according to claim 1, further comprising a data canceling device configured to cancel excessive facsimile communications data when a clock of the ISDN line is faster than that of the modem.

5. (original) The facsimile use modem apparatus according to claim 4, further comprising a noise suppressing device operative to suppress noises output from the speaker by repeatedly using a previous data when the clock of the ISDN line is slower than that of the modem.

6. (original) The facsimile use modem apparatus according to claim 2, wherein said silicon data access arrangement, speaker, and ISDN interface collectively form a network control unit of the facsimile.

7. (original) A facsimile apparatus including the modem as claimed in any one of claims 1 to 6.

8. (original) A network connecting a facsimile apparatus having the modem as claimed in any one of claims 1 to 6.

Masashi Tokuda, S.N. 10/763,707

Dkt. 2271/71523

9. (new) The facsimile use modem apparatus according to claim 1, wherein said signal converting device includes a DSP section, and said DSP section converts a facsimile transmission signal or facsimile reception signal to generate the linear data supplied to the speaker.
